

**TIRE SERVICE INTERNATIONAL**

## **1200R Truer**

- The 1200R Truer produces a flat cut surface or can be adjusted to cut on a camber and will produce a camber cut of up to 5 degrees.
- A shaved tire's tread profile will usually result in a slight increase in the width of the tire's contact patch, putting a little more rubber on the road.
- The 1200R Truer come with A1 - A6 adapter set and is capable of shaving a tire up to 18" wide and wheels sizes up to 24.5".
- Shallower tread depths reduce the tire's slip angle, increasing its responsiveness and cornering power by minimizing tread block squirm.
- 60 hz. 110-115 V. Single Phase
